Chemfiesta

Best Answer: Le Chatelier's Principle is a very useful tool to predict the direction of the equilibrium. There are mainly 3 factors which disturbs the equilibrium. 1) Change in concentration 2) Change in pressure (by changing volume) 3) Change in temperature I will explain the effects of these changes by ...Le Chatelier's Principle is a chemical principle that states a system in equilibrium is disturbed by changes in determining factors, such as temperature, pressure, and concentration of components. Le Chatelier's Principle and catalysts. Catalysts have sneaked onto this page under false pretences, because adding a catalyst makes absolutely no difference to the position of equilibrium, and Le Chatelier's Principle doesn't apply to them. This is because a catalyst speeds up the forward and back reaction to the same extent. Le Chateliers Principle Answer Key PHYSICAL SCIENCES PAPER 2 MEMORANDUM. ... The principle . Write your answers ... This PDF book contain le chatliers principle answers chemfiesta conduct. ... To download free le chtlier's principle answers you need to register.
